Office Action Summary

Application No.

09/401,584

Applicant(s)

GAVRILOVICH, CHARLES D.

Examiner

Jean A Gelin

Art Unit

2681

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 April 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 30-36 and 49-112 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 63-74 and 97-102 is/are allowed.
- 6) ☒ Claim(s) 30-36, 49, 54-62, 75-89, 93, 103 and 107-112 is/are rejected.
- 7) ☒ Claim(s) 50-53, 90-92, 94-96 and 104-106 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- ☐ Interview Summary (PTO-413) Paper No(s). _____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____.

DETAILED ACTION

1. This is in response to the Applicant's amendments and arguments received April 27, 2003 in which claims 37-48 have been canceled. Claims 30-36 and 49-112 are currently pending.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 83-88 and 107-112 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

After reading the specification, the Examiner does not find a specific passage that corresponds to limitations of claims 83-85. For instance, claim 83 recites a communication system adapted to simultaneously provide a communication channel having a data rate of at least 2 megabits per second to each of a plurality of mobile units traveling at a speed greater than 45 kilometers per hour, wherein the density of mobile units to geographic area is at least 6,500 mobile users per square kilometer. This limitation is nowhere to be found in the specification.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 2681

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 33 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding to claim 33, the phrase "wherein the signal corresponds to a received signal received at the transmitter from a fixed radio port" is not clear. How does a transmitter receive a signal?

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 30-36, and 49, 54, 58, 61, 62, 89, 93, and 103 are rejected under 35 U.S.C. 102(b) as being anticipated by Yokoi et al (US 5,282,239).

Regarding claim 30, Yokoi teaches a transmitter (i.e., within moving base station 10 or 20) adapted to transmit a signal to a mobile unit (i.e., portable telephone 2 or 19) while the transmitter (i.e., moving base station 10 or 20) has a motion relative to Earth along a predetermined path (i.e., moving base station 10 or 20 is coupled to an elevator, which has the capability to move relative to earth) and in accordance with an anticipated motion of the mobile unit (i.e., a person carries the portable telephone, and moves relative to the moving base station and the earth), wherein the motion of the transmitter .

is controlled (i.e., typically a person presses a floor number for the elevator to move, then the portable telephone in communication via the moving base hands off the call to another base station) independently to the anticipated motion of the mobile unit (see, col. 4, lines 37-64, col. 5, line 38-67, col. 7, lines 11-63, and col. 8, lines 5).

"With respect to claim 89, the claim is rejected as being anticipated by Yokoi for the same reason as claim 30 above."

Regarding claim 31, Yokoi teaches wherein the predetermined path (i.e., parallel track is the path) has a contour corresponding to a roadway contour and the anticipated motion of the mobile unit is on the roadway (col. 8, lines 24-34).

Regarding claim 32, Yokoi teaches a wherein the transmitter is further adapted to travel on a conveyor device along the predetermined path (col. 7, lines 21-38, col. 8, lines 24-34).

Regarding claim 33, Yokoi teaches wherein the signal corresponds to a received signal received at the transmitter from a fixed radio port (i.e., sending a call via the moving base, col. 4, lines 6, lines 46-55).

Regarding claim 34, Yokoi teaches a receiver (i.e., within moving base station 10 or 20) adapted to receive a signal to a mobile unit (i.e., portable telephone 2 or 19) while the receiver (i.e., moving base station 10 or 20) has a motion relative to Earth along a predetermined path (i.e., moving base station 10 or 20 is coupled to an elevator, which has the capability to move relative to earth) and in accordance with an anticipated motion of the mobile unit (i.e., a person carries the portable telephone, and moves relative to the moving base station and the earth), wherein the motion of the receiver is

controlled (i.e., typically a person presses a floor number for the elevator to move, then the portable telephone in communication via the moving base hands off the call to another base station) independently to the anticipated motion of the mobile unit (see, col. 4, lines 37-64, col. 5, line 38-67, col. 7, lines 11-63, and col. 8, lines 5).

"With respect to claim 93, the claim is rejected as being anticipated by Yokoi for the same reason as claim 34 above."

Regarding claim 35, Yokoi teaches wherein the predetermined path (i.e., parallel track is the path) has a contour corresponding to a roadway contour and the anticipated motion of the mobile unit is on the roadway (col. 8, lines 24-34).

Regarding claim 36, Yokoi teaches a wherein the transmitter is further adapted to travel on a conveyor device along the predetermined path (col. 7, lines 21-38, col. 8, lines 24-34).

Regarding claim 49, Yokoi teaches a movable base station (10, 20) adapted to establish a communication link between a fixed port (4) and mobile unit (2) while the movable base station has a motion relative to Earth along a predetermined path (i.e., moving base station 10 or 20 is coupled to an elevator, which has the capability to move relative to earth) and in accordance with an anticipated motion of the mobile unit (i.e., a person carries the portable telephone, and moves relative to the moving base station and the earth), wherein the motion of the movable base station is controlled independently to the anticipated motion of the mobile unit (see, col. 4, lines 37-64, col. 5, line 38-67, col. 7, lines 11-63, and col. 8, lines 5).

Regarding claim 54, Yokoi teaches a movable base station (10 or 20) adapted to have a motion relative to a fixed port (fixed base or central switch) along a predetermined path and in accordance with an anticipated motion of a mobile unit (col. 4, lines 37-59), comprising: a first radio interface adapted to establish a first communication link between the movable base station and the mobile unit (i.e., moving base in communication with the portable telephone 2, col. 4, lines 44-47); and a second radio interface adapted to establish a second communication link between the movable base station and the fixed port (typically user of the mobile can move the base station by the press of a button in the conveyance, and col. 4, lines 40-44), wherein the motion of the movable base station is independently controllable to the motion of the mobile unit (see, col. 4, lines 37-64, col. 5, line 38-67, col. 7, lines 11-63, and col. 8, lines 5).

Regarding claim 58, Yokoi teaches wherein the frequency band is a millimeter wave frequency band (i.e., low frequency band, col. 3, lines 61-63, col. 4, lines 32-33).

Regarding claim 61, Yokoi teaches a wherein the transmitter is further adapted to travel on a conveyor device along the predetermined path (col. 7, lines 21-38, col. 8, lines 24-34).

Regarding claim 62, Yokoi teaches wherein the signal corresponds to a received signal received at the transmitter from a fixed radio port (i.e., sending a call via the moving base, col. 4, lines 6, lines 46-55).

Regarding claim 103, Yokoi teaches a method of providing a communication connection between a communication network and a plurality of mobile units (such as portable telephone 2) having a motion relative to a plurality of fixed ports (such as fixed

Art Unit: 2681

base 4), wherein the plurality of fixed ports are communicatively coupled to the communication network, the method comprising the steps of: establishing a first communication link between the plurality of mobile units and a first fixed port of the plurality of fixed ports through a movable base station having a motion in accordance with the motion of the mobile units (col. 4, lines 37-59); and simultaneously handing off the plurality of mobile units to a second fixed port of the plurality fixed ports (col. 7, line 21 to col. 8, line 15).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 55, 56, 75, 76, 78, 81, and 82 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yokoi in view of Charas et al. (US 5,404,570).

Regarding claim 55, Yokoi teaches all the limitations above except wherein the first communication link and the second communication are established within a frequency band having a lower limit greater than 300 megahertz.

However, the preceding limitation is known in the art of communications. Charas teaches a base station having a frequency converter that transmits and receives RF information in the 1500 MHZ which is greater than 300 MHZ (col. 4, lines 6-11, col. 5, lines 24-34). Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to implement the technique of Charas within the

system of Yokoi in order to transmit and receive the high RF signal to a communication unit inside a vehicle, and synchronize the output frequencies of the high RF signal and low RF signal and avoid interference if two or more vehicles are close to each other and are receiving signals from the same base station.

Regarding claim 56, Yokoi in view of Charas teaches all the limitations above. Charas further teaches wherein the frequency band has a lower limit of 300 megahertz (col. 3, lines 61-63).

Regarding claims 75, 81, and 82, Yokoi in view of Charas teaches all the limitations above. Yokoi further teaches a processor adapted to establish a communication link between the plurality of mobile units and at least one of the plurality of fixed radio ports based on a plurality of signal quality indicators, each of the signal quality indicators corresponding to each of a plurality of transmitted signals transmitted from the plurality of fixed radio ports (col. 5, lines 47-62, col. 7, lines 21-38).

Regarding claim 76, Yokoi in view of Charas teaches all the limitations above. Charas further teaches wherein the frequency band has a lower limit of 300 megahertz (col. 3, lines 61-63).

Regarding claim 78, Yokoi teaches wherein the frequency band is a millimeter wave frequency band (i.e., low frequency band, col. 3, lines 61-63, col. 4, lines 32-33).

10. Claims 57, 77 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yokoi in view of Ishikawa.

Art Unit: 2681

Regarding claims 57, 77, Yokoi teaches all the limitations except wherein the frequency band is an optical frequency band.

However, the preceding limitation is known in the art of communications. In the same field of endeavor, Ishikawa teaches an optical wavelength multiplex transmission method and optical dispersion compensation method (col. 7, lines 18-44). Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to include operation using optical frequency band for the purpose of using signal light waves of some sort in order to transmit from the transmitter to the repeater and to the receiver in a situation where a line of sight communication path is available.

11. Claims 59-60, 79, 80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yokoi in view of Barkats.

Regarding claims 59, 60, 79, and 80, Yokoi teaches all the limitations except wherein the frequency band comprises a frequency spectrum from 50 gigahertz to 70 gigahertz (i.e., an oxygen absorption frequency band).

In a similar field of endeavor, Barkats teaches a satellite (i.e., repeaters) communication using a range of available frequencies from 30 GHZ to 50 GHZ (col. 4, lines 15-20). Inherently a greater range would be available, e.g., 50 GHZ to 70 GHZ. Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have modified Yokoi to include a higher frequency for communication for the purpose of utilizing a range in which there is not a shortage.

Allowable Subject Matter

12. Claims 63-74, and 97-102 are allowed.
13. Claims 50-53, 90-92, 94-96, and 104-106 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

14. The following is an examiner's statement of reasons for allowance: the prior art teaches a movable base station to establish communication link between a portable terminal and a fixed base station.

As per claims 50-53 on the other hand, the Applicant specifically teaches wherein the motion of the movable base station is based, at least in part, on a speed of the mobile unit. This limitation, in conjunction with all limitations of the independent claims, has not been disclosed, taught, or made obvious over the prior art of record.

As per claims 63-74, 97-102, the Applicant teaches an apparatus adapted to move in accordance with a movement of mobile unit moving comprising: a transmitter adapted to transmit, within the frequency band, a resultant signal to the mobile unit in accordance with at least one of the plurality of signals; and a processor adapted to maximize an amount of transferred information to the mobile unit by evaluating a quality of each of the plurality of signals transmitted from the plurality of fixed radio ports. These limitations, in conjunction with all limitations of the independent claims, have not been disclosed, taught, or made obvious over the prior art of record.

As per claims 90-92 and 94-96, the Applicant teaches adjusting a speed of the transmitter/receiver in accordance with the motion of the mobile unit. This limitation, in conjunction with all limitations of the independent claims, has not been disclosed, taught, or made obvious over the prior art of record.

As per claims 104-106, the Applicant teaches wherein the step of simultaneously handing off the plurality of mobile units comprises the steps of: combining a first incoming signal transmitted from the first fixed port and a second incoming signal transmitted from the second fixed port to produce a resultant signal; and transmitting the resultant signal to the plurality of mobile units from the movable base station. These limitations, in conjunction with all limitations of the independent claims, have not been disclosed, taught, or made obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

15. Applicant's arguments with respect to claims 30-36 and 49-112 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

16. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jean A Gelin whose telephone number is (703) 305-4847. The examiner can normally be reached on 9:00 AM to 6:30 PM.

Art Unit: 2681

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dwayne Bost can be reached on (703) 305-4778. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular communications and (703) 872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 306-0377.
